

2015 Rewarded Clinics

Minnesota Bridges to Excellence and State of Minnesota Quality Incentive Payment System

Minnesota Bridges to Excellence
Celebrating 10 Years of Improving Patient Care

Minnesota Bridges to Excellence (MNBTE) and Quality Incentive Payment System (QIPS) 2015 Report Year: Performance Criteria

When determining if a clinic meets the performance criteria for an Achievement Reward or an Improvement Reward, MNBTE uses the actual performance rate as calculated by Minnesota Community Measurement; performance rates for QIPS are risk-adjusted per methodologies established by the Minnesota Department of Health.

Achievement Reward			
Amount of Reward Per MNBTE/QIPS Purchaser Patient	Minimum Percent of Patients Meeting Measure Criteria		
\$100	Optimal Diabetes Care*	Optimal Vascular Care*	Depression Remission at Six Months
	65%	79%	14%

Improvement Reward			
Amount of Reward Per MNBTE/QIPS Purchaser Patient	Minimum Percent of Patients Meeting Measure Criteria		
\$50	Optimal Diabetes Care*	Optimal Vascular Care*	Depression Remission at Six Months
	Meets or exceeds pre-calculated clinic-specific improvement performance rate		

Methodology to Calculate Clinic-Specific Improvement Rates: Pre-calculated clinic-specific improvement performance rates reflect a 10% reduction in the gap between the clinic's prior year results and the defined improvement target goal (100% for Optimal Diabetes, 100% for Optimal Vascular Care, and 50% for Depression Remission).

- Clinics are not eligible for an improvement reward if they qualified for an achievement reward.
- Each clinic that does not meet the criteria for an achievement reward for a particular quality measure is eligible for incentive rewards for improvement for three consecutive years, beginning with the first year a clinic becomes eligible for payment for improvement. After this, the clinic would be eligible for the achievement reward. If the clinic achieves the achievement reward, then it could be eligible for either award in the subsequent year.

* Performance Rates for the 2015 report year (2014 dates of service) reflect a temporary 4 component Optimal Diabetes Care measure and 3 component Optimal Vascular Care measure

MNBTE and MNQIPS Rewarded Clinics Achievement Reward

MNBTE uses MNMCM actual performance rates to determine eligibility for a reward; MNMCM performance rates are risk-adjusted for QIPS using the Minnesota Department of Health's risk-adjustment methodology. QIPS pays rewards to clinics located in Minnesota, but not in border states.	Optimal Diabetes Care		Optimal Vascular Care		Depression Remission at Six Months

Congratulations to all of the rewarded clinics on your accomplishment. The commitment you demonstrate to excellence in the care of your patients with these chronic conditions is critically important to improving patient outcomes, improving the quality of their lives, and reducing patient health care costs.
